Marika Gobbo

I am a PhD student in the Neural and Cognitive Sciences programme at the University of Trieste in collaboration with the University of Udine.

My current research focuses on the study of the neuropsychology of language in healthy adults and in people with aphasia through psycholinguistic (e.g., discourse analysis), neuromodulation (e.g., tDCS) and neurophysiological (e.g., EEG) approaches.

The ultimate goal of my project is to contribute to developing rehabilitative methods that guide the recovery of language function after brain injury.

Previously, I obtained a Bachelor's degree in Speech and Language Therapy and a Master's degree in Linguistics at the University of Padua. Meanwhile, I worked as a trainee Speech and Language Therapist at the Neurological Clinic of the University Hospital of Padua.
